1 Introduction

This guidance explains how pilots find out what airspace is active.

It is a sample used for testing and is not real guidance.

2 Airspace

Controlled airspace needs a clearance before a pilot enters it.

A pilot stays clear of it unless a clearance is given.

2.1 Class D

Class D airspace is controlled, so the pilot calls the unit first.

Radio failure while inside it is covered by the oper-ator's rules.

3 Danger areas

A danger area warns of activity that is dangerous to aircraft.

3.1 Activation

A danger area is active when its notice says so. The pilot checks the notice before every flight.

3.2 Contact

Where a notice gives a contact, the pilot calls it first.

4 NOTAMs

A NOTAM is a notice to air missions.

CAP 0000 Sample Guidance

4.1 Reading a NOTAM

Item E holds the text and item Q holds the area.

Appendix A Glossary

NOTAM: notice to air missions.
